

# Instantaneous communication

Information teleportation, through entanglement.  
All communication is instant, without delay and  
regardless of distance.

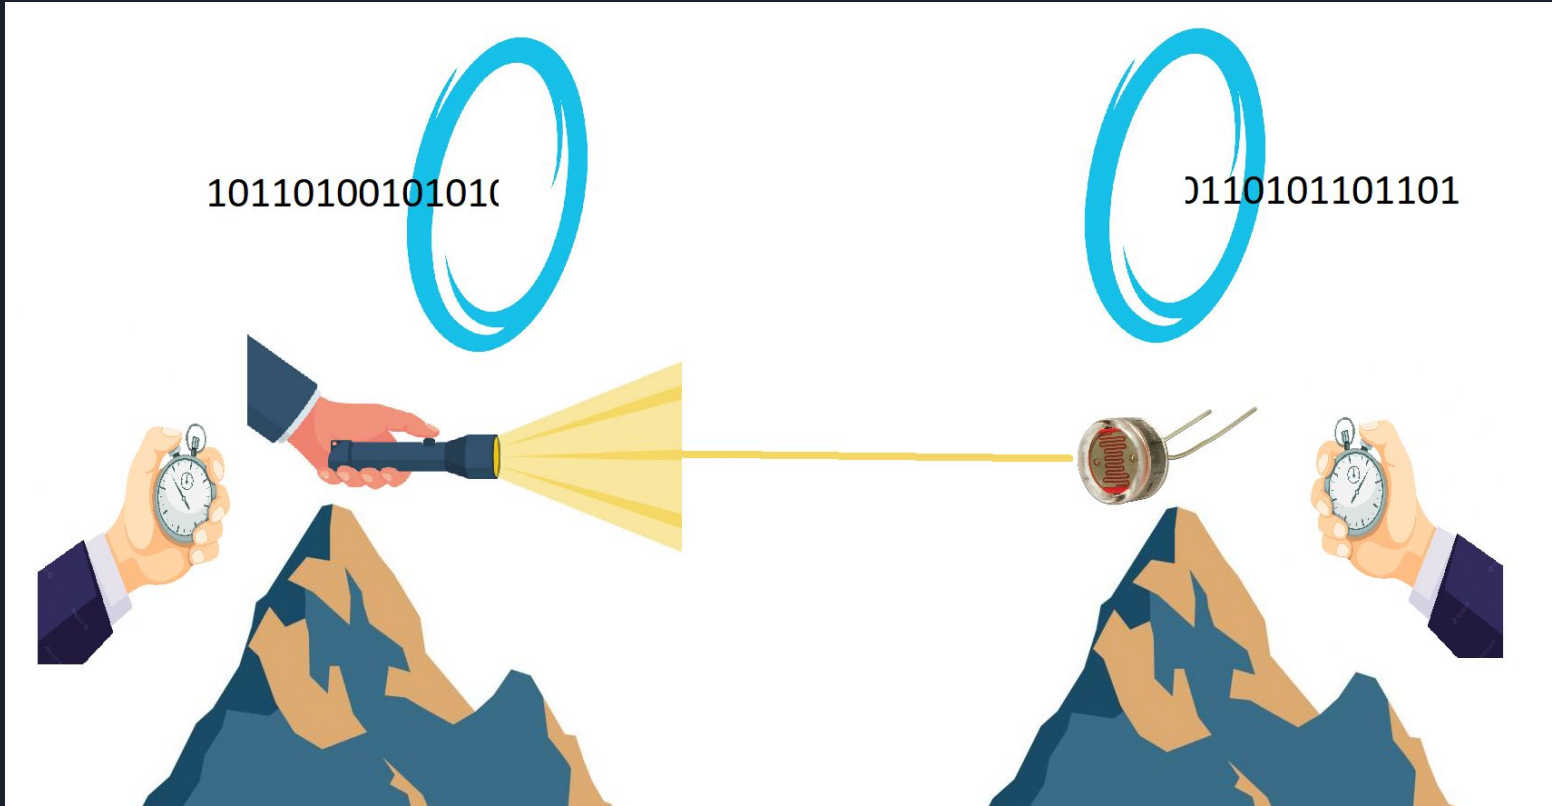

## Deep-Space Optical Communications (DSOC)

# Experiment

- Race against light. (Assume the theory that information cannot travel faster than light, and proceed to falsify that theory)

# Potential problems

- Very long distances
- Imprecise or uncertain measurements
- Influence / Interference from the environment.  
(In both ways, success or failure.)
